---

## PROFILE

Career transitioning to Data & AI professional, currently completing an Associate AI Engineer apprenticeship with AI Singapore, building practical experience in neural networks and applied machine learning. My background spans UX design and stand-up comedy, which trained me to understand people better, communicate complex ideas simply, and find solutions that users want. I try to apply these skillsets to AI engineering, pinpointing the data and design choices that actually matter, then finding creative solutions for user pain points. Passionate about continuous learning and driving meaningful, data-driven outcomes.

## SKILLS

**AI / ML:** Neural Networks, Agentic RAG, Azure AI Services, LLM Workflows, Pytorch

**Data & Analytics:** Python, SQL

**Ways of Working:** Agile, Critical Thinking, Communication

## EDUCATION

Professional Diploma in Data Science — Lithan Academy (2024 – 2025)

## WORK EXPERIENCE

### Associate AI Engineer (Apprentice) — AI Singapore

*Apr 2026 – Jan 2027*

- Learning and applying core neural network and machine learning concepts through a structured, hands-on apprenticeship.
- Currently building an MVP agentic RAG system that generates automated reports for a client(details under NDA).
- Translating UX research instincts into AI product thinking by identifying the data points and user needs that make a model genuinely useful.

### Freelance Stand-up Comedian

*2012 – Present*

- Developed flexible thinking by regularly performing in new and unpredictable situations.
- Gained deep insight into audience behaviour through constant audience engagement.
- Sharpened public speaking and client communication skills, which helps to explaining technical findings to non-technical stakeholders.

### UX Designer & Researcher — AntBuildz, CyberAAS, Rooral, Burda Luxury Candles, Taby 2021 – 2022

- Led and contributed to end-to-end UX research and design across five projects — from quantitative user research to mid/high-fidelity prototypes.
- Synthesized user and market data into actionable insights, aligning stakeholder goals with validated user needs.
- Led a team of 3 on market and user research; delivered UI/UX designs under real-world startup constraints.
